Abstract (en)

[origin: EP1393903A2] The press has a driver to propel a strip material (4) through transfer rollers with a defined speed of a support strip (1). Reorientation units modify direction of the material from transverse to same direction of the support strip so as to deliver the material and the strip to the rollers. A storage disposal joins successive reels of the material without interruption of the delivery of the material to the rollers.
