Abstract (en)

[origin: EP1394073A1] The valve for a container (R) dispensing a fluid product (P) has an outlet orifice (21) closed by a ball shut-off element (30) when the container is in a predetermined position, and a propellant gas absorber (32) situated after the shut-off element in the direction of the fluid flow, releasing the gas at least partially when the pressure around it is sufficiently low.
