Abstract (en)
The invention relates to health, namely to means for disinfecting drinking water. The inventive disinfectant comprises a disinfecting agent and water. A first component in the form of polyhexamethylene guanidine hydrochloride or polyhexamethylene guanidine hydrophosphate and a second component in the form of alkyl dimethyl benzil ammonium chloride or a mixture thereof with quaternary ammonium salts of dimethylamine and/or of tertiary amine are used as disinfecting agents. The mass ratio m between the first and second components ranges within an interval of $5:1 < m \leq 10:1$ when the content thereof ranges from 1.5 to 6.0 mass % and from 0.15 to 1.2 mass %, respectively.
