Abstract (en)
[origin: WO0186682A2] The invention relates to an electromechanical remote switch, comprising at least one fixed contact (1) and a monostable movable contact (2), co-operating therewith, arranged on a slide (7) and which may be displaced by the above relative to the fixed contact (2). The invention further relates to a magnet system (8) with an energising coil (9) and an armature (10) which may be displaced by the above and which is coupled to the slide (7), said slide (7) being retained in a first switch position by means of a return spring (20). For bistable operation of the contacts a slot (15) is provided in the surface of the slide (7) and a pin (16) engages in said slot (15) and is fixed to a rocker (17), which is pivotably mounted parallel to the slide surface comprising the slot (15).
