Abstract (en)  
[origin: WO02094578A1] The invention relates to a document (1) with increased forgery-resistance and a method for production thereof, in which a security element comprises a first impression (4) with a chromatic colour, which is interrupted by non-printed negative contours. A second impression (6) with a metallic effect colour is applied over the first, which comprises an uninterrupted printed surface and is translucent, such that the negative contours in the first impression (4) are still visually recognisable.
