Abstract (en)

[origin: DE10128669A1] The nozzle for a tube filling machine has a casing (11) enclosing a dispensing chamber (13) with an inlet (14) and outlet (15) for the product to be dispensed. A dispensing piston (19, 20) allows the volume of the chamber to be altered. A control sleeve (18) can be rotated in the casing so that a recess (18b) is opposite the inlet or outlet or so that a sloping surface (12a) fits against the casing to close it.
