Abstract (en)
[origin: EP1270441A1] The packaging structure (1) has at least one carrier section (2) for the contents with a bonded protective shrouding, a base (4) and a lid (3) to form a carton. The carrier is hinged to the shrouding, to give a flap action between a stowed rest position between the base and lid and an open access position. The base and lid are component parts of the carton, with its four side walls (5,5',6,6') at right angles to the base. One side wall forms a hinge strip (7), so that the carrier section has a swing movement at the hinge strip, and the butting side walls are stabilized at least in the rest position. The carrier section holds a blister film (20), with the contained pills or capsules welded and sealed in place.
