Abstract (en)

[origin: WO02094711A1] The invention relates to a reversible storage method for hydrogen and a hydrogen reservoir. The aim of the invention is to configure the method and the device in such a way that the hydrogen can be discharged at a low temperature. To achieve this, a voltage is applied to a counter-electrode and the reservoir material in order to recover the hydrogen, the hydrogen discharge rate being set by the voltage magnitude and the current intensity.
