Abstract (en)
[origin: WO02103114A1] The invention relates to a track grinder comprising simple means for protecting against dust and sparks, which enable a precise, relief-dependent separation between the grinding area and the environment, whereby particular arrangements for preventing fires are not necessary, sound proofing is improved and the maintenance of the grinding tools is simplified. The height of the means for protecting against dust and sparks can be adjusted in an at least partially continuous manner or in small steps. Preferably, the means for protecting against dust and sparks are embodied in the form of blinds.
