Abstract (en)

[origin: WO2101150A1] The invention relates to a slip form paver with a tractor (2) comprising a telescopic machine frame (4) which extends telescopically at least perpendicular to the direction of travel and whereon working devices are fixed. At least one of the working devices can be displaced perpendicularly to the direction of travel over the total working width along a longitudinal guide element (56). According to the invention, said longitudinal guide element (56) for the working device has a predetermined length and is mounted on the machine frame (4) in a freely displaceable manner, perpendicular to the direction of travel, without being adapted to a determined working width.
