Abstract (en)

[origin: WO02099780A2] An embodiment of the invention is a system for generating control signals. The system may allow a user to generate an image, representation of an image, algorithm or other effect information. The effect information may then be converted to lighting control signals to be saved or communicated to a networked lighting system. An embodiment of the invention may enable the authoring, generation and communication of control signals such that an effect is generated in a space or area.
