Abstract (en)
[origin: EP1396454A1] A first object of the invention is to provide a movable body system having a guide rail to guide a movable body and having power feeder devices disposed at proper positions. <??>A second object of the invention is to provide a movable body system having a guide rail to guide a movable body and having primary and secondary transformers suitable for the system. <??>In order to achieve the first object of the invention, a power transmitter is mounted on a guide rail, or a portion of the power transmitter is mounted on a member for supporting the guide rail or on a rail bracket for supporting the guide rail. <??>In order to achieve the second object of the invention, an outer end of a primary transformer on the movable body side is positioned nearer to the movable body side than an outer end of a secondary transformer, as projected the outer ends along a motion direction of the movable body. <IMAGE>
