Abstract (en)

[origin: EP1396603A1] The sliding door moves between a horizontal open and a vertical closed position. The door leaf (11) is made of panels (14) extending transversely the whole length of the leaf and pivoted together. The door has stops (36) for at least one pivot between two panels to hold them in a coplanar orientation. The stop can be integrated into the leaf guides for movement between open and closed conditions.
