Abstract (en)

A plug connector arrangement (100) has a socket housing with receptacle contacts and a plug housing with pluggable contacts. To make an electrical connection between the receptacle contacts and the pluggable contacts, at least one of the housings is a moveable housing that moves toward the other housing that is a fixed housing. At least one actuation slide means (108, 110) is mounted on the movable housing (104) and is displaceable in a direction (112) transverse to a direction (106) of movement of the moveable housing. The actuation slide means (108, 110) has at least one control element (114) that co-operates with at least one control means (116) arranged on the fixed housing (102) such that the movable housing (104) moves toward the fixed housing when the actuation slide means (108, 110) is displaced. The actuation slide means (108, 110) has at least one latching device (124) that co-operates with at least one corresponding latching element (116) on the fixed housing (102) to hold the moveable housing (104) in position relative to the fixed housing (106) before actuation. <IMAGE>
