Abstract (en)

[origin: DE10129613A1] The invention relates to a method for producing a fibre strip provided with a three-dimensional surface structure, especially a material strip or a hygiene strip. According to the invention, the fibre strip having a dry content of <35 % is pressed onto an embossing strip (14) by means of a first pressure field (16), thereby being pre-embossed, and is then pressed once more on an embossing strip (14) by means of another pressure field, for further dehydration and drying, in order to fix the three-dimensional surface structure and strength. The invention also relates to a corresponding device.
