Abstract (en)
[origin: DE10126676A1] The device for determining at least one parameter of medium flowing in a pipe has at least one filter (30) installed in the pipe (3) to absorb substances in the pipe which are harmful to the atmosphere. The filter is installed on the inner wall (28) of the pipe which has a recess (33) to receive it. The recess is constructed so that the cross section of the pipe upstream and downstream of the filter is the same as that in the region of the filter. The filter is an activated carbon filter. An Independent claim is included for a use for an activated carbon filter in a device for determining at least one parameter of a medium flowing in a pipe, and especially the induction air mass of an internal combustion engine.
