Abstract (en)

[origin: FR2825558A1] The interactive communication system allows spectators (1) to exchange messages (5) during the broadcast of a public event (6). During the event the spectators are able to compose messages (5) on phones and send them to a central server provided by the broadcaster (7). The interactive communication system allows spectators (1), who are provided with either television receivers (3) or giant screens (4), to exchange messages (5) during the broadcast of an event (6) by a broadcaster (7). The broadcaster provides a server (8), and the spectators each have a transmitter terminal (9), such as a mobile phone (10), connected to the server. During the event the spectators are able to compose messages (5) by means of their own terminals, and transmit these messages via the terminal to the server. The broadcaster (7) is then able to display these messages (5) on the receiver screens.
