Abstract (en)
[origin: EP1397987A1] Sock pulling-on device (1) comprises a base part (2) forming a standing surface, and a shaft-like sock holder (4) extending upward from the base part for putting over a sock. The sock holder has a peripherally closed upper shaft region (5) and a lower shaft region (6) open on one side so that a foot can be introduced through the closed shaft region and through the open shaft region outward until the sole comes into contact with the base part. Preferred Features: The sock holder forms together with the base part a boot-like unit in which the sock holder extends upward from the rear region of the base part in a boot-like manner.
