Abstract (en)  
[origin: EP1398141A2] The folding machine for box blanks (8) has a folding station (2) in which the side flaps (29,31) are folded and overlapped in a closure position. The station has conveyor (9) belts with the gap between conveyed blanks being dependent on the size of the tube formed from the blank. A closure station (4) is provided for the blank closure sections and also has a conveyor. There is an intermediate station (3) which has a conveyor to reduced the spacing between the blanks.
