Abstract (en)
[origin: EP1020388A2] Between the air pressure source and the ejector (3) is a shiftable shut-off valve (2) which can be controlled to switch on and off alternately in the beat of the sheet-processing machine. The timings of the switching on and off within one work beat can be adjusted in dependence on the production data. An adjustable throttle element can be provided between the air pressure and ejector through which the flow volume flowing through the throttle can be adjusted. The shut off valve and/or throttle element can be adjusted manually.
