Abstract (en)

[origin: EP1398744A1] The system includes a video surveillance step of a place or a zone (3) due to local stations (2), a step of detection of a predefined triggering event detected by the detection unit (1), e.g. intrusion of a person in this place or zone or the start of a fire, an alerting step close to a central station. The next steps include video recording of images delivered by the station, extraction of a video sequence having this triggering event, this sequence covering the predetermined time span of a front phase of the triggering event and also the phase after this event. The final step includes sending via TCP/IP, of this video sequence to this central station.
