Abstract (en)  
[origin: WO02083517A1] The invention concerns a drinking-cup designed to be adjusted on a bottle (B) containing a beverage to be consumed, said drinking-cup (1) forming a hollow body pierced with a beverage intake (10), an air intake (11) and a mouth (12), and delimited by a wall with annular cross-section (2) enclosing the axis (X) of the bottle and a closure wall (3) arranged obliquely relative to the axis (X), the air intake (11) and the mouth (12) being respectively formed in connecting zones with open angle (K) and closed angle (J) of the wall with annular cross-section (2) and the closure wall (3). The invention is characterised in that the wall with annular cross-section (2) is a rotating wall flaring out at some distance from the beverage intake (10) and the mid-plane (P) connecting the air intake (11) to the mouth (12) forms with the axis (X) an angle (A) not less than 30 degrees. The inventive spout is particularly applicable to champagne tasting.
