Abstract (en)

[origin: WO03000567A1] The invention relates to a transport unit which comprises a plurality of panels (2) selected from a group consisting of insulating panels (2). The panels are preferably rectangular and are stacked in one or more adjoined stacks to form a pile of panels (2) shaped as a substantially rectangular prism. The rectangular prism has a bottom surface, a top surface, a front surface, a back surface and at least two side surfaces. The bottom surface is supported using one or more support elements (3), wherein at least one of the support elements has a length of at least 15 % of the perpendicular distance between the front surface and the back surface. The transport unit further comprises one or more carrying feet (4) for carrying the pile of panels, wherein the carrying feet (4) for carrying the pile of panels are at least partially in contact with the one or more support elements, where the one or more support elements (3) represent the interface between the bottom surface of the panel pile and the carrying feet (4).
