Abstract (en)
[origin: WO03002800A2] The invention relates to a thread processing system (S) comprising a textile machine and at least one thread delivery device, which are assigned to the peripheral auxiliary devices (3 to 6, 18), wherein the thread delivery device has a computerized control device (C) that is connected by signal transmission to the auxiliary devices. At least certain auxiliary devices have at least one component configured in such a way that they generate and/or receive signals. According to the invention, the thread delivery device (F, F') has at least one local, autonomous communication bus system (BL) for the transmission of serial data at least from and/or to the auxiliary devices, said bus system being connected to the control device (C).
