Abstract (en)
[origin: WO02073041A1] The invention relates to a pump unit for rainwater recycling systems. Said unit comprises a housing that surrounds a pump, a drinking water storage device and conduit means and/or control means as functional elements. According to the invention, the housing has at least one moulded body consisting of a foamed plastic, the moulded body has recesses, into which the functional elements are inserted and the functional elements are interconnected via the electric conduction means or the via the conduit means.
