Abstract (en)

[origin: EP1400647A1] The partition (1) moves by an upper support device (2) on a guide rail (3) and is guided in a lower floor guide which has a tab-type profiled arm which can be screwed onto the partition and is able to move vertically restricted relative to the partition. Horizontal profiled arms of a support profile (7) engage with play over the upper and/or lower side edge (11, 14) of the partition and between the horizontal profile arm and the end edge is a pressure member e.g. pressure plate which can be set directly or indirectly against the end edge.
