Abstract (en)

[origin: WO02098762A1] The invention concerns an improvement to a device delivering one or several foam compositions, more particularly a polyurethane foam, from a container provided with a valve and an adapter (1) fixed on the valve. There is provided, either at the valve, or at the end or along a tube (3) associated with said valve, a restriction of the channel, wherein circulate(s) said foam composition(s) when the device is actuated. The restriction can be produced by a nozzle (5) comprising one or several apertures (4) fixed at the end of said tube.
