Abstract (en)
[origin: WO03004781A1] An assembly device (1) for the connection between a panel unit (2) used in the soil retaining wall (3) construction, and at least one stabilising element (5) for the said panel (2). This assembly comprising: an anchoring end (7), made in the shape of a hammerhead, and which retains a stabilising element (5); a cavity (8), which comprises: a first chamber (9), which opens up into one of the two opposite faces (10) of the panel unit (2) has a cross-section such as to allow the introduction of the anchoring end (7) made in the shape of a hammerhead; a second chamber (11), which is contiguous to the first chamber (9) The second chamber (11) has sections complementary to that of the anchoring end (7), so as to retain this end after rotation around an axis (12) orthogonal to the face (10) of the panel unit (2) in a manner of a bayonet assembly.
