Abstract (en)
[origin: FR2826712A1] The invention relates to a cooking oven comprising a casing (1) which is equipped with support feet (2) and which contains a cooking enclosure (3) and heating means (4, 5), said heating means being controlled by cooking operation programming means. According to the invention, the oven comprises sensors (15), which are disposed in each of the feet (2) of the casing (1) and which are designed to supply respectively an electric signal that is representative of the weight supported by each foot, means for determining the total weight from the signals received from the sensors (15), means for calculating the weight of the food from the total weight and means for transmitting the weight of the food to a display unit (19) and/or the programming means.
