Abstract (en)

The device (8) has a triangular shaped opening (12) formed in a board (10). The opening is sized to receive a respective tetrahedral package (1) and is related with a holder (14) for retaining the package. The holder has a tab (16) and two flaps (18) made integral with the board. The tabs partially enter a surface defined by the opening and the flaps are pushed backward when the package is inserted into the opening.
