Abstract (en)

[origin: EP1403983A1] The machine (1) has a pivoting device (2) for serving processing stations (3,6) with cable ends with a pivoting arm (2.1) with a gripper (2.2) that serves the processing stations with the leading cable ends and then with the trailing cable ends of a cable section. While the processing stations are being served with cable ends the cable axis of the cable ends is parallel to the longitudinal axis of the pivot arm.
