Abstract (en)

[origin: WO03003815A1] The invention relates to a method for propagating plants by cuttings and/or raising plants, in particular roses, wherein cuttings are formed, which cuttings are brought into contact by at least one cut surface with a growth hormone solution, while a supra-optimal hormone time is used, and also relates to an apparatus for propagating plants by cuttings and raising plants, in particular roses, comprising a synchronization space in which a method according to any one of the preceding claims can be used and a number of spaces for raising and further treatment of the plants, wherein in or at the synchronization space, means are provided for regulating at least the temperature and the lighting.
