Abstract (en)
[origin: EP1275319A1] The bracelet has two arms (10,12) which may open and shut by turning about a pin hinge (14). A watch (18) is housed within a head (16) which lies entirely over one bracelet arm surface (10b) adjacent to the hinge when the bracelet is open. When the bracelet is shut the head is rotated through 90 degrees about an axis (BB) using a tenon (22) such that the head straddles both bracelet arm surfaces (10a,12b).
