Abstract (en)
[origin: WO03008052A1] The invention relates to a light structural core made of wood for sliding bodies, for example skis, especially cross-country skis, having grooves or slots (3) arranged in the longitudinal rows, extending in lines in a staggered manner in the longitudinal direction of the skis. The grooves or slots (3) are only open towards the running surface. When seen from a longitudinal section, said grooves or slots are shaped like the arc of a circle or are provided lengthwise with rounded corners.
