Abstract (en)

[origin: WO03006148A1] The invention concerns granules obtainable by drying an emulsion comprising at least an active substance; optionally a surfactant selected among non-ionic polyalkoxylated surfactants, or among anionic surfactants; at least a water-soluble or water-dispersible compound, selected among: (i) polymers obtained by polymerisation of at least an ethylenically unsaturated acid monomer and at least an ethylenically unsaturated hydrocarbon monomer; (ii) natural or synthetic polypeptides, optionally comprising at least a hydrophobic graft; (iii) highly depolymerized polysaccharides optionally comprising at least a hydrocarbon hydrophobic graft; at least a control agent selected among: complexing agents including at least one element of columns IIA, IVA, VA, VIII, IB, IIIB; cationic polymers. The inventive granules provide the advantage of enabling, once they are applied, gradual controlled or elicited release.
