Abstract (en)

[origin: WO02083369A1] The aim of the invention is to ensure a coupling between the handle (2) and the machine housing (1) of the hand tool machine which dampens the vibrations thereof as much as possible. The handle (2) is coupled to the machine housing (1) by at least two parallel levers (4, 5) which are essentially perpendicular to the longitudinal axis (3) of the hand tool machine. The levers (4, 5) are hingedly connected to both the machine housing (1) and the handle (2).
