Abstract (en)
[origin: WO02100655A1] A label sheet pad construction (100) including a plurality of label sheets (108) stacked and bound together with glue (120) along stacked edges thereof. Each of the label sheets has a backing sheet (150) having a release coating (154) and a face sheet (160) realisablely adhered with adhesive (164) to the backing sheet (150). A header (170) cut line through the face sheet (160) to the backing sheet (150) forms a face sheet header portion (174) adjacent the edge (112) and an opposite face sheet body portion. A label cut line (180) through the face sheet (160) forms at least one label (130) and a face sheet matrix (190), both disposed in the face sheet body portion. The matrix (190) is preferably not removed by the manufacturer. The top label sheets (108) can be peeled off of the pad and the label(s) thereon removed, either before the sheet is peeled off or after, by peeling the labels off of the release coating (154) of the backing sheet (150). No stiff backing sheet is needed whereby the bottom label sheet defines the bottom of the pad.
