Abstract (en)
[origin: WO0174163A1] Methods of delivering a desired polypeptide to an individual are disclosed. The methods comprise administering to the individual an immunogenic vector comprising a nucleic acid encoding the desired polypeptide operably linked to regulatory elements in combination with one or more of Vpr protein, a functional fragment of Vpr protein, a nucleic acid encoding Vpr protein operably linked to regulatory elements, or a nucleic acid encoding fragment of Vpr protein operably linked to regulatory elements. Methods of inhibiting an undesirable immune response in an individual are disclosed. Methods for inhibiting the cellular proliferation of a tumor cell in an individual are disclosed.
