Abstract (en)
[origin: WO03000809A1] The invention relates to the use of an aromatic-free mixture of solvents which contains or consists of: (A) at least one low-boiling organic solvent and (B) at least one organic solvent selected from the groups comprising high-boiling and medium-boiling organic solvents, where (1) at least one of the organic solvents (A) and/or (B) has a Hildebrand Solubility Parameter d (HSP) between 10.5 and 12.0 (cal/cm³)^{1/2} and a Hydrogen Bonding Index (HBI) between -15 and -20; and (2) at least one of the organic solvents (A) and/or (B) has a Hildebrand Solubility Parameter d (HSP) between 8 and 9.7 (cal/cm³)^{1/2} and a Hydrogen Bonding Index (HBI) between 0 and 12. The property profile of mixtures containing solvents which are cured physically, thermally and/or using actinic radiation, and products produced therefrom is improved by the above. The invention also relates to a mixture which can be cured physically or thermally and/or by means of actinic radiation and which contains said aromatic-free solvent mixture.
