Abstract (en)

[origin: WO03006912A1] A barrel assembly (14) for insertion into a parent barrel (13) of a gun (10) wherein said barrel assembly has a plurality of projectiles (16) axially disposed within at least one barrel (15a) of said barrel assembly and associated with discrete selectively ignitable propellant charges for propelling the projectiles from said at least one barrel wherein said barrel assembly (14) includes a parent barrel engaging means. The barrel is suitably provided in a removable rear barrel section (15a) having engagement means (17, 18) for operatively aligning the rear barrel section with a forward barrel extension. Spare rear barrel sections (15b, 15c) may be stored in a stock (11) of the gun (10) and automatically fed into alignment upon exhaustion of the projectiles (16) in the barrel.
