Abstract (en)

[origin: WO02103331A1] The invention relates to a system of flow-through cells that is obtained by assembling a body (11) with a base plate. The body (11) comprises the following elements which are adapted for the exact positioning of the body in the receiving openings of a support in three directions (X, Y, Z direction): (a) a first spring element and a first stop, disposed on opposite end sections of the body (11), (b) at least one second spring element and a corresponding second stop, disposed on opposite faces of the body (11), and (c) at least one support element and at least one retaining element.
