Abstract (en)  
[origin: WO03007232A1] RFID transponder comprising an integrated circuit (IC) connected to an antenna circuit. The antenna circuit is constituted of at least one lead frame (LF) layer. These lead frame layers are shaped and formed to be at same time the antenna, which can be three dimensional by using several lead frame layers, the mounting substrate for the ASIC (Application Specific Integrated Circuit) or integrated circuit (IC) and as support for the packaging.
