Abstract (en)

[origin: WO03007322A1] The invention relates to a switching device (1) comprising a housing (2) and a breaker mechanism (3), the latter consisting of a trip lever (4), a catch (5), a displaceable contact arm (6) and a deflection shaft (7) that is fixed to the housing. the aim of the invention is to generate a constant contact force (K3). To achieve this, the end of the catch (5) is coupled to the displaceable contact arm (6) by means of a bolt (9). Said bolt (9) is configured to be displaced in a receiving element (11) that is formed by the housing (2).
