Abstract (en)
[origin: WO03005454A2] The invention relates to a BIMSM element (M,M'), in which at least the substrate (1,1'), the electrode pair (2) and the photosensitive layer (3) are combined in a monolithic structure. According to the invention, at least one electrode of the electrode pair (2) can be used to induce a modulation voltage, at least one electrode of the electrode pair (2) can be used to decouple a mixed product and the MSM element (M,M') can be used as an electro-optical mixer.
