Abstract (en)  
[origin: WO03007424A1] The invention relates to a lightening protection device for high frequency lines having a defined impedance level, whereby the lightening protection device (1) comprises a waveguide (5) arranged in a lightening protection support (2) and a pitch conductor (8) branching from said wave guide, the end of the conductor opposite a connecting point (9) with the waveguide (5) being connected to a ground potential. The waveguide (5) of the lightening protection device (1) is made of two waveguide conductor sections (13a, 13b), whereby the impedance level thereof is lower than the impedance level of the connected high frequency line. The impedance level of the pitch conductor (8) is higher than the impedance level of the connected high frequency line.
