Abstract (en)
[origin: EP1406442A2] A tele-text receiving apparatus (100) and a display method thereof. The tele-text receiving apparatus comprises an input unit (110) having a picture/text display mode key and a channel change mode key, and a control unit (200) for dividing a screen of the display unit (170) and respectively displaying information corresponding to channels tuned by the main-tuner (122) and the sub-tuner (124) on the divided screens when a picture/text display mode key signal is received through the input unit (110), the control unit (200) for controlling a selected screen of the divided screens according to a signal input through the input unit (110) when a channel change mode key signal for controlling any one screen of the divided screens is received through the input unit (110) during the picture/text display mode operation. Accordingly, it is possible to display the television programme picture of one television channel next to the teletext of another television channel concurrently. <IMAGE>
