Abstract (en)
[origin: WO03008053A1] A ski binding comprising a toe unit and a bearing device arranged approximately to the rear of the toe unit. The bearing device comprises a sliding plate, which underlies the sports shoe of the user when the sports shoe is associated to the ski binding, the bearing device comprising guiding means for guiding and supporting the sliding plate, said guiding means being arranged so as to allow the sliding plate to perform, with respect to the ski, a rotary-translation movement, which is automatically adaptive to various sizes of the sports shoe.
