Abstract (en)  
[origin: WO03008282A1] The invention relates to a novel interlocking container (1) which comprises a base plate (2), four lateral walls (3, 4) and an upper peripheral edge (6), whereby at least one pivotable shackle (7) is disposed in the edge (6) protruding into a free opening (15) of the box container which in a pull-out position and can be folded down in a retracted position in the edge area (6). The shackles comprise two elbow-shaped end areas (11), which are respectively guided in a semi-circular groove (8) disposed in the wall of the container and are provided with the groove engaging positions (A, B, C), so that the shackle (7) can be locked in the different positions.
