Abstract (en)
[origin: FR2819239A1] The invention concerns a waste container receptacle (1) for household use, comprising a base (2), a side wall (3) and an opening opposite the base, characterised in that the receptacle (1) comprises a false bottom (6) defining with the base (2) a compartment (7) for receiving a reserve of bags, the false bottom being provided with an orifice (8) allowing through a single bag, the bags being successively linked to one another detachably, so that when a bag pre-positioned in the receptacle is removed, another bag is extracted from the compartment (7) until said two bags are detached from each other, and the process is repeated for the other bags.
