Abstract (en)
[origin: WO0162835A1] The invention concerns a novel method for treating the surface of plastic material comprising the following steps: (1) applying on at least one of the surfaces of the plastic material a composition with polymerisable and/or crosslinkable reactive functions comprising: 1 to 99 wt. % of at least a polymerisable and/or at least partly polymerised silicone matrix A, including (co)monomers, (co)oligomers and/or (co)polymers selected among those having oxetane functions (frA); 99 to 1 wt. % of at least a polymerisable and/or at least partly polymerised matrix B, including (co) monomers, (co)oligomers and/or (co)polymers selected among those having epoxy (alpha 1), and/or acrylate (alpha 2) and/or alkenyl-ether (alpha 3) and/or hydroxy (alpha 4) reactive functions (frB); an efficient amount of at least a cationic or cationic and radical initiator system C; and optionally at least a sensitizer D and at least a pigment E; (2) polymerising and/or crosslinking the treated surface under an irradiating source and/or under electron beam(s).
